

Graffiti disappears with water!

Graffiti removal takes a lot of time, energy and money. Also, most Anti-Graffiti Coatings still require expensive cleaning products and special equipment in order to obtain a satisfactory result. AG 6010 makes these 'extras' redundant. Graffiti is easily removed within a few minutes with water and a sponge or brush.

Anti-Graffiti Coating

The new way to deter all graffiti artists

Anti-Graffiti Coating

Graffiti can be removed in a jiffy

Tunnels, buildings, noise barriers, etc., are not safe from graffiti. Or rather, they weren't safe, but with AG 6010 expensive removal methods are a thing of the past. In recent years AG 6010 (finish) has been successfully applied to supermarkets, government offices, monuments and a wide variety of other projects in both the public and private sectors.

Widely applicable

AG 6010 is a unique coating system that provides effective protection against all forms of graffiti on cement, brick, stone, wood, polyester, metal and other painted surfaces.

User friendly

Once a surface is treated with two coats of AG 6010, graffiti can be easily removed with soap and water. Rough surfaces need to be treated with a soft brush; for larger areas pressurized hot or cold water can be used.

Tectyl should be removed with water and washing-up detergent, which will cause no damage to the AG 6010 coating.

There is no other system that is as easy to clean. It is permanent, which means that it can be cleaned time after time without damaging the coating.

Invisible solution

Because AG 6010 (finish) is a clear coating, the surface to be treated should be properly painted or cleaned before starting treatment. Light coloured surfaces such as brick and natural stone may be slightly darker after treatment. A pre-treatment with AG 6010 (sealer) minimises this.

Properties

- Long-term protection
- Just clean with water
- UV-resistant
- Permanent Anti-Graffiti Coating
- Cannot be painted over, except with AG 6010 itself
- Easy to apply
- Available in matte and gloss
- Also ensures that stickers and posters have poor adhesion to the treated surface

keep your city clean
