

A waste of money - or a windfall for the environment?

Stickers, posters and graffiti quickly become a mess and that is the opposite of what was intended! After all, you want a tidy, attractive streetscape that appeals to shoppers, tourists and investors.

Fortunately there is a solution...

Anti-Sticker Coating

The new way to discourage flyposting

The solution

you get attached to

Anti-Sticker Coating

Trash cans, lampposts, mailboxes and benches are not safe from stickers, posters or graffiti. Or rather, they weren't safe, but from now on AS 2010 provides an effective deterrent. Kill two birds with one stone: you save on costs and have an attractive street.

Attractive and repellent

Attractive due to cost savings on maintenance and cleaning, in addition to retaining a handsome streetscape. Repellent for graffiti artists and other street polluters. Stickers and posters cannot adhere to the surface. Graffiti can be easily removed with a special gel.

Sticker repellent

AS 2010 is a coating with an extremely fine texture. The coating is specially designed for smaller objects in public areas. Find out for yourself with the enclosed sample, no sticker will adhere to the surface. Run your hands over the surface and feel how fine the structure is, while noting that it cannot cause injuries.

Discourage graffiti artists

A few squirts with a spray can and you've left your calling card – at least, that's what a graffiti artist thinks. AS 2010 will put a stop to this, as its special treatment means graffiti is short-lived. AS 2010 includes a special gel that allows your employees to easily remove the unwanted 'works of art'.

keep your city **clean**

No maintenance contract necessary

The specialists of CAS Nederland B.V. apply the coating. That's it! Expensive cleaning methods are unnecessary. A maintenance contract is not necessary. To remove graffiti you do not have to get a specialist in, as your own staff can easily remove it with the special gel. The gel can even be reused.

Complete CAS range

AS 2010 is the ideal solution for smaller objects. AW 4010 Anti-Flyposter Coating is available for larger projects. This preventative system, with a special bark structure, is already being successfully used by several Dutch municipalities and other clients. AW 4010 discourages illegal flyposting, makes streets less inviting for vandalism, improves the economic appearance and increases the area's prestige. AW 4010 is the solution for traffic control cabinets, sewage pumping station cabinets, electrical cabinets, cable TV cabinets and parking meters.

Anti-Sticker Coating

Anti-Flyposter Coating

The specialist

CAS Nederland B.V. specialises in the establishing and maintaining of innovative environment-friendly and preventive coatings - AW 4010 (Anti-Flyposter), AG 6010 (Anti-Graffiti) and of course AS 2010 (Anti-Sticker). CAS identifies, inspects and maintains shopping centres, gas stations, buildings, bridges and overpasses for various clients. CAS is part of Manders Totaal, a company with over 80 years of experience in protecting and preserving various surfaces.

manders totaal
da's mooi gemaakt!

Feel the fine structure and note (the lack of) the adhesion strength of a sticker on this surface.

AS 2010 is available in different RAL colours as well as in the form of a transparent solvent.
